Myst can be applied throughout the growing season without damage to turf. Myst has been formulated to be applied both a single or split long term application or as a bi-monthly application. For all application programs make first application usually in the spring before the onset of localized dry spot and drought stress. For best results apply before the onset of turf stress, as part of a managed application program. Myst should be applied by conventional spray equipment.

APPLICATION	Rate of Myst/1,000 sq. ft.	Timing	Water Volume/1,000 sq. ft.	Watering In
Single Long Term Application	16 fl. oz.	1 initial application in spring before symptoms of LDS	6 gallons	Yes
Split Long Term Application	8 fl. oz.	1 initial application in early spring before symptoms of LDS and then repeat after 7 – 10 days	3 gallons	Yes
Bi-Monthly Application	5 fl. oz.	1 initial application in spring before symptoms of LDS then repeat after 7 – 10 days then repeat every 8 weeks throughout growing season	2 gallons	No

WATERING IN: Watering in is required when Myst is applied at 16 fl. oz. and 8 fl. oz./1,000 sq. ft. Water in immediately after application with at least 1/4" of irrigation. When using the 5 fl. oz./1,000 sq. ft. rate, it is not essential to water in after application by conventional spraying equipment but best results will be obtained by watering in 0-18 hours after application.

TANK MIXING:

- Do not tank mix the 16 fl. oz. and 8 fl. oz. rates. Before application, refer to other product label for any tank mix restrictions.
- Test the tank mix for physical compatibility and apply to a small area to determine any effect on turf quality.
